Mahdi Mortazavi

CTO & Head of Product · Full-Stack Engineer · Co-Founder

I solve the problem first and choose the technology second. Six products designed, built and released across **four different toolchains** — because each problem demanded a different one. Technology is an instrument, not an identity.

Products shipped & released	Startups built or led	Toolchains — Dart, Rust, Kotlin, TS	Organic GitHub stars	Solo: design → build → release

VENTURES & LEADERSHIP

CTO & Head of Product

Senagh · AI assistant for real-estate agents

Technical and product lead for an **AI-agent assistant that works alongside real-estate agents** — the system absorbs the repetitive half of the job so the agent spends their hours with clients instead. I own the architecture, the agent design and the product direction. senagh.ir

Co-Founder

HealthTech startup · Cardiac early-warning

Building software for the **early detection and prevention of heart attack** — a problem where a few minutes of warning is the difference between saving someone and losing them. I work on product architecture and the signal pipeline.

Co-Founder

Admobify · Developer monetization

Infrastructure that lets developers inside constrained markets connect AdMob and actually receive their revenue. The hard part was payments, not code — and it had been keeping an entire region of builders out of the global market.

Community Organizer

Startup Legend

Running a founder community: programming, coordination and growth.

HOW I WORK

Problem before stack

I open a problem down to its most basic parts, then take the tool it actually calls for: Rust for a native binary, Kotlin for Android, Flutter for cross-platform, TypeScript for the web.

New tech is not a cost

Learning an unfamiliar language or framework mid-project is normal for me. Four different toolchains, all self-taught, all shipped and public.

Speed to released

Idea to public release in weeks, working alone. I use AI tooling for speed — it never replaces understanding the code.

OPEN-SOURCE PRODUCTS — PUBLIC, SHIPPED, VERIFIABLE

Nava Minimalist productivity app · Flutter, Dart ★ 22 · 2 forks

Everyone adds features to fix focus; I removed them. Squircle geometry, haptic feedback and calm breathing animations — interaction tuned to Apple-native fidelity, not framework defaults.

github.com/Mahdi-mortazavi/app

Flow · تک‌نقطه Persian/RTL focus & habit app · Flutter, Android ★ 21 · 2 forks

Habit apps collapse the first day you miss — so I designed for failure instead of streaks. Fully offline, grounded in behavioral science: one priority a day, a timer that survives the app being killed, habits that come back after a missed day, and statistics that don't judge. Full Persian RTL.

github.com/Mahdi-mortazavi/flow

Sooda Profit & pricing calculator · TypeScript PWA MIT · Lighthouse 100/100/100/100

A calculator needs no server, no account, and none of your data. Bilingual EN/فارسی app for sellers and shoppers: profit, margin, discount and basket totals in one tap. Fully offline after first load, tracks nothing, and scores a perfect Lighthouse across all four categories. Deployed by GitHub Actions.

mahdi-mortazavi.github.io/sooda · github.com/Mahdi-mortazavi/sooda

Mova AI anti-procrastination app · React 19, TypeScript, Gemini MIT

Perfectionism isn't a time-management problem, so I stopped treating it like one. A psychology-based app for people who stall at the starting line — bilingual, built on React 19 and Vite with Gemini in the loop.

github.com/Mahdi-mortazavi/Mova

purify Disk-cleanup utility · Rust + Tauri, Windows MIT

Went with Rust + Tauri instead of Electron for a native-speed binary at a fraction of the size. The complexity stays behind the scenes; the user sees one simple, safe decision.

github.com/Mahdi-mortazavi/purify

relay Android ↔ Windows connection sharing · Kotlin Apache 2.0

Every similar tool routes your data through a server; this problem never needed one. Local-only pairing between phone and PC — no cloud, no accounts, no telemetry. Privacy from the architecture, not from a policy page.

github.com/Mahdi-mortazavi/relay

TECHNOLOGIES

MOBILE
Flutter, Dart, Riverpod, Kotlin, Android SDK, Swift

WEB & BACKEND
TypeScript, React 19, Next.js, Vite, PWA, Node

AI ENGINEERING
Gemini API, multi-agent orchestration, Temporal, Windmill, agentic coding

SYSTEMS & DESKTOP
Rust, Tauri, Python

INFRASTRUCTURE
Supabase, Firebase, Cloudflare, GitHub Actions, Railway

PRODUCT & DESIGN
Figma, iOS HIG interaction design, RTL & localization, PWA performance

Available now for remote work — full-time or contract.

Fastest reply on Telegram or WhatsApp; phone calls welcome. Send me a hard problem and I'll tell you within a day whether I can solve it and how I'd start.
