PROFILE

Full-stack developer and product builder who takes problems apart from first principles and ships the answer as a real product. Builds across Android, Windows, Flutter, Rust, the web and Cloudflare's edge, with a consistent standard: open source, offline-first, private by design, and Persian (RTL) treated as a first-class language. Every project is built in public, with automated CI releases.

SELECTED PROJECTS

Relay · Android + Windows app — 2026

Share your phone's internet with your PC — Android to Windows reverse tethering over an encrypted WireGuard tunnel. No root, no server, no account.

- One WireGuard tunnel carries all TCP and UDP traffic, with DNS and IPv6 leak protection at 22 µs per connection and an optional kill switch.
- Shares whatever the phone is on, including its VPN, and re-checks the best route every ten seconds.

Kotlin · Jetpack Compose · .NET 8 · WinUI 3 · Go · WireGuard · GitHub Actions

Flow · Android app — 2026

An offline-first Persian/RTL focus, habit and deep-work app built on behavioral science: one daily boulder, a crash-proof focus timer, habits that recover after failure, and a judgment-free stats mirror.

- Crash-proof focus: the timer runs on the wall clock, so closing the app or rebooting the phone never loses a session.
- Habits built as “after [X], [tiny behavior]” with recovery rate instead of punishing streaks.

Flutter · Dart · Riverpod · SQLite · Jalali calendar

Sooda · Progressive web app — 2026

A bilingual profit, selling-price and discount calculator for shopkeepers and small businesses. Enter a purchase price and the margin you want, and Sooda gives you the selling price and the profit. It installs like an app, works offline, and everything stays on your device — no server, no tracking, no analytics.

- Profit, selling price, discount and reverse discount, each one screen and one tap.
- Real profit: picks when the money comes back and estimates the restock cost from inflation, or from a price you already know.

React · TypeScript · Vite · Tailwind CSS · IndexedDB · PWA

Purify · Windows app — 2026

An ultra-fast, intelligent disk-cleanup utility for Windows, built with Rust and Tauri. Safely reclaim storage with zero cognitive friction — native and blazing fast.

- Disk map: a fast treemap of the space that matters, reading the NTFS Master File Table directly when elevated.
- 30+ built-in cleanup signatures for caches, leftovers and developer clutter, each labelled Safe, Likely safe or Review needed.

Rust · Tauri 2 · NTFS / MFT · TOML · GitHub Actions

Overrun · Multiplayer game — 2026

A real-time multiplayer arena shooter running on Cloudflare Workers and Durable Objects — low-latency state at the edge.

- One simulation, three homes: the shared package has no DOM, no renderer and no network, so client and server run identical code.
- One Durable Object per match keeps authoritative state at the edge, close to every player.

JavaScript · three.js · Web Audio · Cloudflare Workers · Durable Objects · PWA

Nava · Mobile app 2026

A Jony Ive-inspired minimalist productivity app — squircle design, haptic feedback and calm breathing animations. Pure, intentional, distraction-free.

- Liquid Glass UI: translucent, blurred surfaces with tint gradients, hairline borders and physics-based press animations.
- Background-safe focus timer derived from wall-clock deltas, so it never drifts even if the app is suspended mid-session.

Flutter · Dart · Riverpod · Haptics

SKILLS

Mobile	Flutter, Dart, Riverpod, Kotlin, Jetpack Compose
Desktop	C#, .NET 8, WinUI 3, Rust, Tauri 2
Web	TypeScript, JavaScript, React, Vite, PWA, WebGL
Edge & networking	Cloudflare Workers, Durable Objects, WebSockets, WireGuard, Go
Data	SQLite, IndexedDB, Offline-first sync
Design	Product design, Liquid Glass UI, Motion, RTL & Persian typography
Practice	First-principles thinking, Open source, GitHub Actions CI/CD, Privacy by design

LANGUAGES

Persian (native) · English
